

SCRUBBERS

Whether you are looking for a shipyard to complete top and bottom side modifications, prefabrication of modules, or a partner to support your engineering team, Seaspan Shipyards are here to assist.

Experience

Seaspan Shipyards work collaboratively with ship owners, scrubber manufacturers, design and integration consultants, and onboard riding crews to complete scrubber installations and minimize vessel downtime.

Seaspan Shipyards have installed several scrubber systems which have included:

- Scrubber tower installation
- Sea chest modules prefabrication and installation
- Engine exhaust casing modifications including duplex stainless steel
- Equipment foundations
- Sea water and exhaust system modifications

LNG CONVERSIONS

Replacing diesel and heavy fuel oil with LNG allows ship operators to reduce emissions and meet the increasingly stringent MARPOL requirements.

Converting a ship to operate on LNG is a complex task requiring the integration of several new systems with existing ship infrastructure. Seaspan Shipyards have the proven capabilities to convert your ship to this clean burning fuel.

Experience

Seaspan Shipyards work collaboratively with ship owners, design and integration consultants, and onboard riding crews to undertake LNG conversions and minimize vessel downtime.

Seaspan Shipyards LNG experience includes the installation of:

- LNG tanks
- Cryogenic piping
- Glycol systems
- Gas valve units
- Bunker stations
- EX-rated equipment
- Gas detection systems
- Rupture discs
