

The Maritime Marketplace

Procurement 4.0

Complex administration in procurement devours budget and wastes valuable time of purchasing departments.

Digitization of the process and connecting professionals directly brings higher efficiency and replaces useless administration.

FOR SHIP MANAGERS

MESH optimizes maritime procurement by increasing efficiency and focusing on the core business. Operational activities are digitally automated and free of commercial risk and administrative time waste using the globally unique MESH algorithm. The tool is **cost-neutral**, requires no technical effort for installation and works offline on board.

Smart & innovative catering

Empowering the captains' freedom leads to a concentration on responsibilities and higher efficiency. Operational buyers, who waste their time with boring activities, become strategic buyers who procure with a forward-looking approach.

MESH is digital and cost-effective catering with even higher quality while increasing the mental well-being on board. The fixed budget and precise consumption monitoring guarantees shipping companies risk-free use and full reliability globally and at any time.

UNIQUE Benefits!

The interactive and easy-to-use order form can be used for all global ports and contains information about consumption, budget and all nutritional values. The catalog is convenient for all vessel types and sizes as well as all nationalities on board.

The platform digitalizes the entire maritime supply chain from A-Z. It includes a worldwide supplier network with global price data and conditions. The finished order is sent directly to the partners: **no order cuttings, no discussions, just a smooth process.**
